

# You've Just Witnessed Secure Capture from a Mobile App Using TWAIN Direct

*And now it's in your hands!*

The P3iD™ DoxaScan™ and Business Efficiency Center platform

P3iD's Business Efficiency Center (BEC) environment provides powerful mobile capture and cloud microservices built on modular components that let you securely capture and process your important documents in a driverless TWAIN Direct cloud or network environment.

**DOXA**SCAN™

# The P3iD workflow explained

## Step 1 | Begin the Workflow

Use a desktop, tablet or smartphone (iOS Or Android) to initiate the workflow.

## Step 2 | Secure Authentication and Single Sign-on

Login with your DoxaScan credentials. After successful authentication, simultaneous logins to BEC and cloud services occurs.

## Step 3 | Validate Identity & Access Secure Network

Validate user via Active Directory behind the firewall.

## Step 4 | Initiate the Scan

Set the job controls and processing Commands using P3iD DoxaScan, with Natural Language Processing instructions powered by DocuFi.

## Step 5 | TWAIN Direct Scanner

Scan your documents with a TWAIN Direct scanner on the same or another network. No drivers required.

## Step 6 | Cloud Processing & Delivery

Automatically process your document via the Robotic Process Automation engine and a collection of cloud microservices for data extraction.

**Deliver your documents to an email, application or file server.**

## P3iD Partners

DocuFi provides mobile and Natural Language Capture and Cloud processing solutions that simplify the delivery of secure and privacy redacted documents.

Xiid's Identity Management effectively minimizes the attack surface in comparison to any other identity management solution available today, making it impenetrable for attackers outside your network.
